

Optical Glass Ultrasonic Cleaning Equipment

This optical glass ultrasonic cleaning equipment is designed for precision cleaning applications in industrial settings. The machinery features multiple cleaning tanks, advanced control panels, and robust construction for efficient and reliable operation.

Product Overview

Precision Cleaning for Optical Components

This industrial-grade ultrasonic cleaning equipment is specifically engineered for the rigorous cleaning requirements of optical glass components. Featuring advanced multi-tank configurations, the system ensures high-purity results through precise ultrasonic agitation. Its robust construction and intuitive control interface make it a reliable choice for professional optical manufacturing environments.

Technical Configuration

Available System Models

Model Identifier	Tank Configuration
YFO-15186R	15-tank system
YFO-8060R	8-tank system

Target Applications | Optical Glass, Precision Cleaning, Industrial Components

Equipment Features

Design & Build

Multi-Tank System • Industrial Grade • Precision Control
