

Optical Receiver Module for Broadcasting

This optical receiver module is designed for radio and TV broadcasting applications. It converts optical signals into electrical signals, ensuring compatibility with standard broadcasting equipment through its various ports and connectors.

Product Overview

High-Performance Optical Conversion

The AL-CPMODULA Optical Receiver Module is engineered specifically for professional radio and TV broadcasting environments. Designed with a rugged, weatherproof housing, this unit ensures reliable operation even in demanding outdoor installation conditions. It effectively converts high-quality optical signals into electrical signals, providing seamless integration with standard broadcasting infrastructure.

Technical Specifications

Connectivity Features

- Optical Input
- Electrical Output interfaces
- Integrated Power Supply components

Model Name	AL-CPMODULA
Primary Function	Optical to electrical signal conversion
Deployment	Outdoor, Weatherproof, Broadcasting
