

Optical Switching Device Expansion Unit

This is a low-level expansion unit common to the FonsWeaver series. It saves on business interconnect ports, thereby reducing investment costs.

Product Overview

High-Capacity Network Expansion

This optical switching device expansion unit is designed to serve as a low-level expansion solution for carrier-grade network infrastructure. It enhances service access capabilities by enabling flexible local routing for various business interfaces, including FE, E1/T1, and E3/T3. The unit is engineered to optimize port usage, reduce overall investment costs, and provide reliable TPS protection.

Technical Capabilities

Protection Mechanisms

TPS Protection

Key Design Features

- Modular design for flexible configuration
- Advanced optical signal processing
- Comprehensive management capabilities
- Carrier-grade reliability

E1 Business End Capacity

756 ports

Supported Interfaces

FE, E1/T1, E3/T3
