

Ore Terminal Belt Conveyor System

This system includes seven belt conveyors with a total length of 7.8 kilometers. It has a rated capacity of 9000 tons per hour and an annual loading and unloading capacity of 40 million tons.

System Overview

High-Capacity Ore Terminal Solution

This industrial-grade belt conveyor system is engineered for high-volume material handling in demanding environments such as ports and mining terminals. The system consists of a comprehensive network of 7 belt conveyors, providing a total transport length of 7.8 kilometers. Designed for efficiency and scale, it supports a rated capacity of 9000 tons per hour, ensuring reliable throughput for large-scale operations.
