

# Outboard Motors for Boats

Outboard motors provide propulsion for boats. These engines are mounted on the transom and offer power for recreational boating and other water activities.

## Product Overview

### High-Performance Outboard Propulsion

These outboard motors are designed to deliver reliable and powerful propulsion for various marine applications, including center console boats. Engineered for efficiency and performance, these units provide consistent thrust for recreational and professional boating needs. The system supports multi-motor configurations to ensure optimal speed and maneuverability on the water.

## Technical Specifications

### Rated Power per Unit

**200 HP**

Power Output

### Configuration

Twin-Engine Capable, Center Console Compatible
