Product Overview

High-Performance LED Matrix

This P10 outdoor LED display matrix module is designed for vibrant and reliable performance in demanding outdoor environments. Engineered with precise molds for excellent color consistency and integrated encapsulation for enhanced durability, it offers superior resistance to high temperatures, oxidation, and static. With its compact 320mm x 160mm form factor, it provides a versatile solution for professional-grade advertising and information display systems.

Technical Specifications

| | |
|--------------------------|---------------|
| Pixel Pitch | 10 mm |
| Module Size | 320mm x 160mm |
| Horizontal Viewing Angle | 140 degree |
| Pixel Density | 17200 dots/m2 |

Features

Design & Durability

- Anti-UV protective epoxy resin coating
- Anti-oxidation and anti-static construction
- High-temperature welding resistance
- Precision molded plastic shell
- Advanced contrast enhancement

Color Configurations

Single Color, Dual Color, Full Color

Quality Assurance

Rigorous Aging Process

Every module undergoes a strict 72-hour aging test to ensure maximum reliability. During this testing phase, units are monitored for defects such as dead lamps, dim segments, color inconsistency, or mosaic patterns, ensuring only the highest quality components reach the market.
