

Outdoor Optical Node for Broadcasting

This outdoor optical node is designed for radio and television broadcasting applications. It features a weatherproof enclosure and internal circuitry for signal processing, suitable for signal distribution and management in broadcasting networks.

Product Overview

Professional Outdoor Optical Node

The CM3000/645-01 is a high-performance optical node engineered specifically for reliable radio and television broadcasting signal distribution. Featuring a durable, weather-resistant enclosure, this unit ensures stable operation and superior signal integrity in challenging outdoor environments. Designed for professional broadcasting networks, it provides robust management and processing capabilities to maintain high signal fidelity across distributed infrastructures.

Technical Specifications

Model Number	CM3000/645-01
Device Type	Optical Node

Design and Build

Enclosure Rating	Weatherproof • Outdoor-ready
Primary Applications	Radio Broadcasting, Television Broadcasting, Signal Distribution
