

# Overhead Industrial Supply System

This overhead system is designed for efficient distribution of utilities. It features color-coded conduits and support structures for organized routing in industrial or commercial environments.

## Overview

### Industrial Overhead Supply System

This overhead supply system is engineered for efficient and organized utility distribution in demanding industrial and commercial environments. The modular design, featuring parallel conduits and robust support structures, allows for scalable integration of various service lines. It is an ideal solution for facilities requiring reliable, high-capacity utility management with a clean, overhead layout.

## Design & Construction

### Configuration Features

- Color-coded supply lines for easy identification
- High-density parallel conduit arrangement
- Integrated suspension and support framework

### System Type

Overhead Modular Utility Distribution

### Modular Components

MA 2000 Service Modules, Parallel Conduits, Vertical Stanchions, Suspension Brackets
