

Overhead Line Anchor Clamps

Anchor clamps are essential components in overhead line systems, providing secure and reliable connections for conductors. These clamps are designed to withstand mechanical stresses and environmental conditions, ensuring long-term performance and safety.

Overview

Reliable Overhead Line Solutions

Anchor clamps are essential components in overhead line systems, providing secure and reliable connections for conductors. These components are expertly engineered to withstand significant mechanical stresses and harsh environmental conditions, ensuring long-term performance and operational safety. Designed for versatility, they are available in various configurations to accommodate different conductor types and specific installation requirements.

Technical Specifications

Key Features

- High mechanical stress resistance
- Environmental durability
- Secure conductor connection
- Versatile configuration options

Available Models

CS10, CS14

Application

Overhead line systems

Function

Conductor anchoring and connection
