

Overlock Sewing Machine Crankshaft Connecting Rod Components

These are components for the crankshaft connecting rod in overlock sewing machines. The assembly ensures reliable power transmission and smooth operation, contributing to consistent stitch quality and reduced downtime.

Product Overview

Precision Engineering for Industrial Sewing

These crankshaft connecting rod components are precision-engineered specifically for overlock machinery. Designed for high-speed sewing applications, they feature robust metal construction to ensure optimal performance, reliable power transmission, and smooth operation. By maintaining critical timing and motion, these essential parts contribute to consistent stitch quality and reduced machine downtime.

Technical Details

Included Components

- Crankshaft
- Connecting rods
- Associated bearings

Construction Quality

Robust Metal Construction • Exacting Tolerances

Primary Application

Industrial Sewing, Overlock Machinery, High-Speed Operation
