

Packaged Water Source Heat Pump for Climate Control

This packaged water source heat pump provides efficient heating and cooling using water as a heat source. Its robust design includes a galvanized steel casing, a high-efficiency compressor, and accessible service panels for easy maintenance.

Overview

Efficient Climate Control Solution

This packaged water source heat pump is designed for high-efficiency heating and cooling in residential, commercial, and industrial settings. By utilizing water as a heat source and sink, it provides an environmentally friendly and cost-effective alternative for climate management. The unit features a robust galvanized steel casing and advanced controls for precise temperature regulation and optimized energy savings.

Technical Specifications

Casing Material	Galvanized Steel
Suitable Applications	Residential, Commercial, Industrial

Key Features

Performance Highlights

1 Included

High-Efficiency Compressor

1 Included

High-Efficiency Heat Exchanger

Maintenance & Design

- Accessible service panels
- Easy component access
- Simplified installation process

Control System

Advanced Controls • Precise Temperature Management • Energy Saving Mode
