

Paddy Field Crawler Tractor

This crawler tractor is designed for protective tilling in paddy fields. Its robust track system provides superior traction and stability on uneven terrain.

ADDITIONAL IMAGES

Overview

Designed for Paddy Field Efficiency

This crawler tractor features a compact, novel design optimized for paddy field operations. Its triangular crawler driving system increases ground clearance, preventing sinking and protecting soil integrity during cultivation. Equipped with reliable hydraulic transmission, it offers endless speed operation and simplified control for enhanced productivity.

Performance & Operation

Transmission	Hydraulic
Model ID	SF752
Control System	Single lever for steering and implement lifting

Capabilities

Supported Attachments

- Rotary tilling
- Ploughing
- Ridging
- Ditching

Hitch System	Tri-points hydraulic hanging device
--------------	-------------------------------------

Design Features

Driving System	Triangular crawler
Key Advantages	Anti-sinking, Soil protection, Compact structure, High ground clearance
