

Paddy Grain Separator

High-performance paddy separator designed for efficient separation of paddy grains based on size and density. It features adjustable inclination and oscillation settings for optimal separation accuracy.

Product Overview

High-Performance Paddy Grain Separation

This paddy grain separator is designed to deliver superior separation efficiency by utilizing a screen manufactured through a specialized process. It offers a wide application range and delivers large capacity per unit area, ensuring high output for rice mills and grain processing facilities. Engineered for stability and reliability, it helps maximize yield while minimizing grain loss.

Performance Metrics

Separation Effect

High Efficiency • Precision Separation

Capacity

Large capacity per unit area

Technical Features

Screen Construction

Specialized process manufacturing

Application Range

Rice Milling, Grain Processing, Paddy Separation
