

Palm Fruit Oil Press

The palm fruit oil press is designed to extract oil from palm fruit pulp after it has been mashed and heated. It is suitable for producing hair brown grease.

Product Overview

Professional Palm Oil Extraction

The YZY series palm fruit oil press is engineered for high-volume extraction requirements in professional palm oil processing facilities. Its robust, compact design ensures reliability during operation while maintaining a low palm kernel breakage rate. Featuring an integrated automatic control system, this machine allows for precise adjustments to pressing chamber pressure, ensuring high efficiency and optimal oil yield.

Residual Oil in Cake

8 %

Max Residual Oil

Key Features

Operational Highlights

- Compact and efficient structural design
- Automatic control system for chamber pressure
- User-friendly operation interface
- Low palm kernel breakage rate
