

Pan Framing Head Self-Drilling Screw

This self-drilling screw features a pan framing head. It is designed for efficient drilling and fastening in various materials, eliminating the need for pre-drilling.

Product Overview

High-Efficiency Fastening Solution

This pan framing head self-drilling screw is engineered for rapid, secure fastening in metal framing and construction applications. Featuring a specialized self-drilling tip, it eliminates the need for time-consuming pre-drilling, significantly increasing installation efficiency. The pan framing head design offers a large bearing surface, ensuring a firm hold and a clean, professional finish for your projects.

Technical Specifications

Head Style	Pan Framing Head
Installation Type	Self-Drilling
Common Applications	Metal Framing, Construction, General Fastening

Key Features

Key Advantages

- Eliminates pre-drilling requirement
- Large bearing surface for secure fastening
- Durable metal construction
- Designed for time-saving installation
