

Paper Machine Headbox Production Line

This headbox production line is designed for paper manufacturing. It features a robust frame, adjustable slice lip, and advanced flow control mechanisms for optimal paper formation.

Product Overview

High-Precision Headbox Production

This headbox production line is engineered for high-performance paper manufacturing, incorporating advanced processing equipment and rigorous quality control standards. The manufacturing process covers every critical stage from initial plate cutting and welding to precision machining, pickling, polishing, and final assembly. Designed for consistency and reliability, this system ensures optimal paper formation and minimal maintenance requirements.

Manufacturing Process

Production Stages

- Plate cutting
- Welding
- Machining
- Pickling
- Polishing
- Assembly
- Packing

Quality & Compliance

Quality Assurance

Strict quality records, Advanced processing equipment, Full process traceability
