

Paper Processing Chemicals

Specialty chemicals used in paper manufacturing to modify paper properties. These chemicals enhance surface characteristics, bonding, and other paper qualities.

Product Overview

Comprehensive Paper Processing Solutions

This range of specialized chemicals is engineered to support the entire paper manufacturing and processing lifecycle. From water treatment and initial paper making processes to advanced coating, printing, and functional surface treatments, these solutions are designed to enhance paper quality and production efficiency. Each chemical formulation is tailored for industrial applications, ensuring consistent performance in high-demand manufacturing environments.

Product Categories

Available Chemical Categories

- Water Treatment Chemicals
- Paper Making Process Chemicals
- Water-Based Ink & Varnish
- Coating Chemicals
- Printing Chemicals
- Paper Functional Chemicals

Technical Specifications

Surface Sizing Agent Model	MED2200
Primary Application	Surface Sizing, Adhesive, Paper Treatment
Physical State	White, viscous liquid
