

Paper Production Expansion Project

This project increased the design capacity in Dongguan to 1,350,000 t/a for cowhide high-strength corrugated cardboard and paper. It also expanded the design capacity in Taicang to 1,500,000 t/a for coating high-strength corrugated cardboard and paper.

Project Overview

Industrial Scale Expansion

This large-scale paper production expansion project represents a significant increase in manufacturing capacity for high-strength corrugated cardboard and paper products. The project encompasses two major regional facilities, optimizing output for both cowhide and coating-grade materials. Recognized for excellence in engineering design, this initiative provides robust production capabilities to meet high-volume industrial demand.

Production Capacity

Dongguan Facility Capacity	1350000 t/a
Taicang Facility Capacity	1500000 t/a

Product Specifications

Paper Types Produced	Cowhide Corrugated Cardboard, Coating Corrugated Cardboard, Industrial Paper
----------------------	--

Project Details

Industry Recognition

National Light Industrial Bureau Excellent Engineering Design Award (2000)

Engineering Department	The Pulp and Paper Engineering Design (First Design Engineering Department)
