

Parabolic Reflector Antenna

This parabolic antenna is designed for satellite communication and signal reception. Its large, circular reflector dish focuses incoming signals onto a central point, and it is mounted on a tripod stand for adjustable positioning.

Product Overview

High-Performance Parabolic Antenna

This parabolic reflector antenna is engineered for reliable satellite communication and signal reception. Featuring a durable metal construction, it is optimized for outdoor use in diverse weather conditions. The design includes a precision-engineered dish surface that ensures efficient signal collection, mounted on a stable, adjustable tripod stand for versatile positioning.

Technical Specifications

Primary Applications

- Satellite Communication
- Signal Reception
- Signal Transmission

Material	Metal
Environment	Outdoor, Weather Resistant
Mounting System	Tripod Stand
