

Parabolic Signal Focusing Antenna

This antenna is designed for receiving and transmitting signals. It features a parabolic reflector to focus signals onto the receiving element.

Overview

High-Performance Signal Reception

This parabolic signal focusing antenna is engineered for reliable signal transmission and reception in professional environments. Featuring a precision-designed parabolic reflector, it effectively concentrates signals onto the receiving element for enhanced clarity. Built with durable, weather-resistant materials and a sturdy mounting stand, this unit ensures stable operation across a variety of outdoor conditions.

Technical Specifications

Construction Material	Metal
Finish	Grey
Environment	Outdoor, Weather-resistant
Mounting	Sturdy stand

Application

Compatible Sources

- Satellite
- General signal transmission
- General signal reception
