

Parabolic Space Heater with Adjustable Tilt

This space heater uses a parabolic reflector to efficiently direct heat. It features adjustable heat output and wide-angle oscillation for optimal warmth distribution.

Product Overview

Efficient Focused Heating

The Parabolic Space Heater with Adjustable Tilt is designed to provide targeted warmth for household environments. Utilizing a specialized parabolic reflector, this unit efficiently directs heat output to specific areas rather than diffusing it, ensuring focused comfort. It features a durable, beige-colored housing and an adjustable tilt mechanism for optimal positioning.

Technical Specifications

Housing Color

Beige

Heating Mechanism

Parabolic Reflector

Design Features

Adjustable Tilt, Circular Heating Element, Safety Grill

Control Method

Manual Control Knob

Usage

Intended Use

Household
