

Parallel Flow Evaporator

The evaporator is engineered for efficient heat transfer in refrigeration and air conditioning systems. Its compact design allows flexible installation in refrigerators, freezers, and other cooling appliances.

Overview

Parallel Flow Evaporator Series

The WJ-E702 series evaporator is engineered for superior heat transfer efficiency in refrigeration and air conditioning systems. Utilizing a parallel flow architecture with multi-channel pathways, it maximizes surface area and optimizes refrigerant distribution. Its compact, durable construction ensures reliable performance and corrosion resistance across various cooling applications, including refrigerators and freezers.

Technical Details

Design Type	Parallel Flow
Key Features	High Efficiency, Corrosion Resistant, Compact Design, Multi-channel

Applications

Suitable Applications

- Refrigerators
- Freezers
- Cooling Appliances
- Air Conditioning Systems
