

Particulate Matter Separator

Industrial equipment designed for efficient separation and collection of particulate matter from gas streams. It is constructed from heavy-duty materials and suitable for mining, cement, and chemical applications.

Overview

Industrial Particulate Matter Separation

This industrial mineral processing equipment is engineered for the efficient separation and collection of particulate matter from gas streams. Featuring a robust cylindrical body with a conical hopper design, it ensures reliable performance in demanding operational environments. Built with heavy-duty materials, this unit is an ideal solution for critical filtration needs in the mining, cement, and chemical processing sectors.

Technical Specifications

Design Features

- Cylindrical body
- Conical hopper
- Multiple inlets and outlets
- Robust support structure

Construction

Heavy-duty • Industrial Grade

Equipment Type

Particulate Matter Separator

Applications

Suitable Industries

Mining, Cement, Chemical
