

Passenger Transport Tricycle

This tricycle is designed for carrying passengers. It features a standard motorcycle front end connected to a three-wheeled rear section with seating.

Product Overview

Designed for Passenger Transit

This passenger transport tricycle is engineered for efficient short-distance mobility. Featuring a robust tubular steel frame and a comfortable two-row passenger seating configuration, it provides a stable and reliable solution for transit services. Its design combines the agility of a motorcycle front end with the practical utility of a dedicated passenger-carrying rear section.
