

Passive Coaxial Cable Splitter

This passive splitter is designed for splitting a single input signal into two output signals. It is typically used in cable television (CATV) and satellite television (SAT) systems to distribute signals to multiple devices.

Product Overview

Reliable Signal Distribution

This passive coaxial cable splitter is engineered to efficiently divide a single input signal into two distinct output signals. It is an essential component for CATV and satellite television systems, ensuring reliable signal distribution to multiple devices. Designed with a focus on signal integrity, it minimizes loss while maintaining proper impedance matching for consistent performance.

Technical Specifications

Frequency Range

5 MHz

Min Frequency

900 MHz

Max Frequency

Splitter Type

2-Way Passive Splitter

Connectivity

Port Configuration

- 1 Input
- 2 Outputs

Connector Type

F-Connector

Application

Intended Use

CATV, Satellite TV, Signal Distribution
