

# Patent Application Management Software

This software streamlines the data entry process for patent applications and documentation. It provides tools for formatting, organizing, and submitting applications.

## Product Overview

### Professional Patent Document Management

The ST32 patent document editor software is designed to streamline the creation, processing, and archiving of patent applications in accordance with international standards. By utilizing the ST.32 standard and SGML markup, it ensures that text, charts, and tables are semantically classified and preserved with high integrity. This solution facilitates efficient data management, reduces storage requirements, and enables seamless resource sharing across international patent networks.

## Technical Standards

Compliance Standards	ST.32, SGML, ISO
Data Format	Standard Markup Language

## Functional Capabilities

### Key Features

- Standardized document editing
- Semantic content classification
- Integrated application and approval workflow
- Unified data identification and record keeping
- High accessibility and manageability
- Optimized data storage

### Supported Content Types

Text • Charts • Tables

## Application Workflow

### Workflow Integration

Stage	Function
Application	Standardized entry and formatting
Approval	Unified tracking and records
Modification	Version control and updates
Archiving	Efficient storage and retrieval
