

Patterned Photographic Discs

These are shaped photographic discs. The central circular area appears transparent, while the patterned border may serve a functional or aesthetic purpose.

Product Overview

Professional Photographic Components

These patterned photographic discs are designed for precision use within optical systems. Featuring a unique central circular element surrounded by a detailed patterned border, they provide specialized filtering or masking capabilities. These components are essential for photographic instruments that require specific light transmission or pattern projection.

Technical Specifications

Primary Application

Photographic Instruments • Optical Systems

Design Features

Patterned Border, Central Circular Element, Optical Grade
