

PC Case for Computer Components

This PC case is designed to house and protect internal computer components. It features robust construction with ample space for expansion and efficient cooling.

Overview

Professional PC Case Solution

The GT-6801 PC case is engineered to provide a robust housing solution for essential computer components. Designed with both protection and performance in mind, this chassis offers ample internal space for hardware expansion and supports efficient cooling configurations. Its thoughtful layout facilitates organized cable management and promotes optimal airflow, ensuring the stability and longevity of your system.

Design & Build

Construction	Robust protective enclosure
Key Features	Cable Management, Optimized Airflow, Expansion Ready

Compatibility & Storage

Storage Configuration	Integrated drive bays for storage devices
Motherboard Compatibility	Supports various form factors
