

PCB Design Software Suite

This is a comprehensive PCB design software suite for electronic product development. It integrates modules for design, layout, analysis, and data generation.

Overview

Comprehensive PCB Design Suite

This PCB design software suite is a professional-grade solution engineered for advanced electronic product development. It integrates essential modules for schematic capture, PCB layout, signal integrity analysis, and manufacturing data generation into a unified workflow. Designed to support high-speed design rules and complex constraint management, it streamlines the entire process from initial concept to final production.

Key Features

Core Functionalities

- Schematic capture
- PCB layout design
- Signal integrity analysis
- Manufacturing data generation
- High-speed design rule support
- Constraint management
- Collaborative team workflows

Design Capabilities

Component Placement, Routing, Verification, High-Speed Design, Design for Manufacturability

System Architecture

System Components

Component	Function
System Designer	System-level design and architecture
Board Designer	PCB layout and board-level design
Central Database	Unified data management
