

PCMCIA Network Adapter Card

This PCMCIA network adapter card provides network connectivity through a PCMCIA interface. It supports Compact Flash cards via a PCMCIA adapter, enabling data transfer and network access on compatible devices.

Overview

Connectivity Solution

This versatile PCMCIA network adapter card is engineered to provide essential network connectivity for legacy and specialized industrial devices. Featuring a dedicated GPRS module and a SIM card slot, it enables wireless communication capabilities in environments where traditional network access may be limited. Additionally, the integrated support for Compact Flash cards via the PCMCIA interface allows for flexible data transfer and storage expansion.

Technical Specifications

Interface	PCMCIA
Wireless Module	GPRS
Supported Media	Compact Flash, SIM Card
Model Identifier	PM638G GPRS CI-R

Features

Core Functionalities

- PCMCIA to Compact Flash adapter functionality
- Integrated GPRS wireless module
- SIM card slot for mobile network connectivity
- Reliable data transfer for industrial applications
