

PE Double Wall Corrugated Pipe Extrusion Line

This extrusion line is designed for the production of PE double wall corrugated pipes. The system manufactures high-quality polyethylene pipes with a corrugated structure, suitable for drainage, sewage, and cable protection.

Overview

High-Efficiency Pipe Production

This extrusion line is specifically engineered for the high-volume production of PE double-wall corrugated pipes. Designed for durability and precision, the system integrates advanced extrusion, forming, cooling, and cutting technologies to ensure consistent pipe quality. It is an ideal solution for manufacturing drainage, sewage, and cable protection piping that meets rigorous industrial standards.

Technical Capabilities

Material Compatibility

PE (Polyethylene)

Primary Applications

Drainage Systems, Sewage Infrastructure, Cable Protection

System Components

Included Equipment

- Extruder
- Forming Molds
- Cooling Units
- Cutting Equipment
