

Peanut Skin Removing Machine

This machine efficiently removes skins from peanuts and almonds. It is designed to separate the skin and kernels automatically while maintaining a high peeling rate.

Product Overview

High-Efficiency Peeling Solution

This industrial-grade peeling machine is designed for the gentle and efficient removal of skins from wet peanuts, blanched peanuts, almonds, and broad beans. It features an advanced mechanism that ensures a high peeling rate while keeping the kernels intact and unbroken. The system automatically separates skins from the product, resulting in a bright, clean final output suitable for professional food processing operations.

Performance & Capabilities

Key Performance Features

- High peeling efficiency rate
- Maintains kernel integrity (non-breaking)
- Automatic skin and kernel separation
- Adjustable components for various nut sizes

Compatible Products

Peanuts (Wet), Blanched Peanuts, Almonds, Broad Beans

Construction

Construction Materials

Stainless Steel Components • Robust Metal Frame

Operational Highlights

1 Roller

Peeling Mechanism
