

Pedestal Digital Tire Inflator for Outdoor Use

This pedestal digital tire inflator is a reliable solution for inflating tires in outdoor settings. Its digital interface allows precise pressure settings and easy monitoring.

Product Overview

Robust Outdoor Inflation Solution

The Pedestal Automatic Digital Tire Inflator is a reliable, high-performance solution designed specifically for outdoor environments such as service stations, parking facilities, and commercial depots. Its sturdy pedestal construction ensures stability and long-term durability in varying weather conditions. Featuring a user-friendly digital interface, it allows operators to set precise pressure levels and monitor inflation in real-time for maximum efficiency and safety.

Operational Details

How to Operate

- Connect the hose to the tire valve stem.
- Enter the desired pressure using the digital interface buttons.
- Press the FILL button to begin the inflation process.
- The system will automatically stop once the target pressure is reached.
