

Perforated Metal Ventilation Panel

This perforated metal panel is designed for refrigeration and ventilation applications. It features a dense array of small, evenly spaced holes for optimal airflow.

Product Overview

Professional Ventilation Solution

The Perforated Metal Ventilation Panel is an industrial-grade component engineered specifically for high-performance refrigeration and airflow applications. Featuring a precise, dense array of evenly spaced perforations, this panel ensures optimal air circulation while maintaining structural integrity. It is an ideal choice for HVAC systems, equipment housing, and demanding industrial ventilation requirements.

Technical Specifications

Construction Grade

Industrial Grade • High Durability

Primary Applications

- Refrigeration systems
- HVAC ductwork and venting
- Equipment enclosures
- Industrial air filtration

Key Design Elements

Dense Perforation Pattern, Uniform Hole Spacing, Optimized Airflow
