Product Overview

Versatile Domestic Water Solution

The QB-60 is a reliable peripheral water pump engineered specifically for domestic applications, providing efficient water supply and pressure boosting. Its robust construction features a cast iron pump body and a high-quality brass impeller, ensuring long-lasting performance when handling clean water. With integrated thermal overload protection and a compact design, this pump is an ideal, low-maintenance choice for residential water needs such as irrigation and pressure enhancement.

Technical Specifications

Motor Characteristics

- Single-phase induction motor
- Integrated thermal overload protection
- Compact design for easy installation

Construction Materials

Cast Iron Body, Brass Impeller, Carbon/Ceramic Mechanical Seal

Performance Highlights

Common Applications

Domestic Water Supply • Pressure Boosting • Garden Irrigation • Residential Washing
