

PET Bottle Blow Molding Machine

This machinery is designed for producing plastic containers such as water bottles through an automated blow molding process. It features a preform heating unit and blow molding station suitable for high-volume industrial production.

Overview

High-Efficiency Blow Molding Solution

This automated blow molding system is engineered for the high-volume production of PET plastic containers. Designed for versatility, it supports a wide range of bottle sizes, from compact consumer bottles to large-capacity water cooler jugs. The integrated control system ensures precise process management, making it an ideal choice for industrial-grade beverage and container manufacturing.

Technical Specifications

Core System Components

- Preform Heating Unit
- Blow Molding Station
- Digital Control Panel

Model Series

HZ-90

Application

PET Bottles, Water Containers, Industrial Production
