Advanced Pet Food Production

This multifunctional pet food pellet production line is designed to enhance the marketability of pet food products. It features advanced extrusion technology that allows for the creation of novel shapes, unique tastes, and colors, including cored-filling capabilities. The system is engineered to ensure scientific nutrition formulation and easy assimilation, meeting the demands of the modern pet food industry.

Production Capabilities

宠物食品生产线_03

A state-of-the-art extrusion system designed for high-throughput pet food manufacturing.

Production Capacity

150 kg/h

Minimum Output

2000 kg/h

Maximum Output

Available Capacity Options

- 150kg/h
- 240kg/h
- 500kg/h
- 1ton/h
- 2ton/h

Technical Details

Detailed view of the double-screw extruder and drying components essential for consistent production.

Processing Stages

- Mixing
- Extrusion
- Drying
- Flavoring

Compatible Raw Materials

Soya flour, Bone powder, Corn flour, Fish meal

Features

The machine supports a wide variety of pellet shapes and sizes for different pet types.

Key Features

Cored-filling capability • Adjustable pellet shapes • Scientific nutrition formulation • Easy assimilation • Consistent pellet size
