

# PET Jar Preform Mold

This precision-engineered jar preform mold is designed for high-volume PET container production. It features a multi-cavity configuration, robust steel construction, and an advanced cooling system.

## Overview

### Precision-Engineered PET Preform Solution

This high-performance jar preform mold is engineered for high-volume production environments. Constructed with robust steel for long-term durability, it features a multi-cavity configuration designed to maximize output efficiency. An advanced cooling system ensures optimized cycle times and consistent, high-quality preforms with minimal material waste.

## Technical Specifications

### Key Production Features

- Multi-cavity configuration
- Advanced cooling system
- High-volume output design
- Minimal material waste

<b>Construction Material</b>	Robust Steel
<b>Machine Compatibility</b>	Standard Injection Molding Machines

## Performance Metrics

### Performance Highlights

**1 High**

Consistent Quality

**1 Optimized**

Cycle Time
