

PET Preform Mold

This precision-engineered PET preform mold is designed for high-volume production of consistent and quality preforms. It features optimized cooling channels for efficient cycle times and precise dimensional control.

Product Overview

Precision PET Preform Mold

This precision-engineered PET preform mold is designed for high-volume production, ensuring consistent and high-quality preforms. Built with robust construction for an extended operational lifespan, it features optimized cooling channels that significantly improve cycle times. It is compatible with various PET resins and injection molding machines, providing excellent dimensional control and surface finish for optimal downstream bottle blowing performance.

Technical Features

Cooling Efficiency

Optimized Cooling Channels • Fast Cycle Times

Cavity Configuration

Multi-cavity

Build Quality

Robust Construction, Extended Lifespan, Precision Engineered

Compatibility

Resin Compatibility

- Various PET Resins

Machine Compatibility

Compatible with standard injection molding machines

Performance Metrics

Key Performance Indicators

1 High

Dimensional Control

1 Excellent

Surface Finish
