

Petrochemical Processing Chemical Product

This chemical product is used in petrochemical engineering. It supports the production of various chemical compounds such as alcohols, alkenes, phenols, acids, aldehydes, ethers, and benzene.

ADDITIONAL IMAGES

Product Overview

Industrial Petrochemical Feedstock

This high-purity chemical product is specifically engineered for use within the petrochemical industry. It serves as a vital component in the synthesis of various chemical compounds, including alcohols, alkenes, phenols, acids, aldehydes, ethers, and benzene. Designed for professional industrial applications, it meets the rigorous standards required for large-scale chemical processing.

Product Identity

Chemical Identity	Naphtha (ó 1)
-------------------	---------------

Application Scope

Primary Industry

Petrochemical Engineering • Chemical Manufacturing

Downstream Derivatives	Alcohols, Alkenes, Phenols, Acids, Aldehydes, Ethers, Benzene
------------------------	---
