

Petroleum Products Solidifying Point Tester

This tester is designed to determine the solidifying point of petroleum products. It is widely used for assessing the cold filter plugging point of distillate fuels.

Overview

Precision Solidifying Point Testing

This Petroleum Products Solidifying Point Tester is a high-precision laboratory instrument engineered for the accurate determination of solidifying points in various substances. It features an advanced refrigeration system and precise temperature control, ensuring reliable and repeatable results for quality control environments. Designed for professional use, this apparatus provides a stable testing platform with dual-bath capabilities to meet rigorous industry standards.

Technical Specifications

Temperature Controlling Accuracy

0.5

Accuracy

Power Supply	AC 220V±10%, 50 Hz
Total Power Consumption	1000 W
Cold Trough Temperature Range	Room temperature to -70

Operating Environment

Ambient Temperature	30
Relative Humidity	d85%

Design & Features

Refrigeration System	New-type refrigeration compressor
Cold Trough Configuration	Single trough with two baths; equal temperatures
