

Petroleum Prospecting Drill Bit

This drill bit is designed for demanding applications in petroleum prospecting engineering. Its robust construction features a specialized flute design for efficient material removal and reduced vibration.

Overview

High-Performance Petroleum Prospecting Drill Bit

The FD-A04 is a high-performance drill bit specifically designed for demanding applications in petroleum prospecting engineering. It features a robust construction with a specialized flute design that ensures efficient material removal while significantly reducing vibration during operation. Engineered for precision across various geological formations, this tool provides optimal performance and an extended lifespan for complex petrochemical and foreign engineering projects.

Technical Features

Design Features

- Specialized flute design for material removal
- Vibration reduction technology
- Robust construction for demanding environments
- Precision-engineered for geological versatility

Application

Target Industries

Petroleum Prospecting, Petrochemical Engineering, Foreign Engineering Contracting, Geological Exploration

Performance

Key Performance Benefits

Extended Lifespan • High Precision • Efficient Removal • Low Vibration

Product Identification

Model Number

FD-A04
