

Pharmaceutical Fluid Transfer Pump

This industrial pump is designed for pharmaceutical applications, featuring a horizontally mounted electric motor coupled to a centrifugal pump. The equipment is engineered for precise fluid transfer in pharmaceutical manufacturing, ensuring consistent and reliable performance.

Product Overview

Precision Pharmaceutical Fluid Transfer

This robust industrial pump is engineered specifically for pharmaceutical manufacturing environments, ensuring consistent and reliable fluid transfer. It features a horizontally mounted electric motor coupled to a high-performance centrifugal pump, all constructed from durable, hygiene-compliant materials. The enclosed motor design provides essential protection against contaminants, while the sturdy base ensures stable operation during critical processes.

Technical Specifications

Motor Protection

Enclosed Motor • Contaminant Resistant

Pump Type	Centrifugal
Mounting Configuration	Horizontal
Construction Materials	Hygienic Grade, Durable Industrial Material
Integration Ports	Multiple inlet/outlet ports
