

Pharmaceutical Production Equipment

This equipment is used in the production of pharmaceuticals. It ensures precision and quality control in manufacturing medications and healthcare products.

Product Overview

Pharmaceutical Production Equipment

This high-quality equipment is designed for precision manufacturing and assembly tasks within pharmaceutical environments. Engineered for reliability, it facilitates consistent performance in demanding production settings. Its robust construction ensures durability and efficiency for professional industrial applications.

Technical Specifications

Component Type	Blind Rivets (Pop Rivets)
Mechanism	Rivet body with setting mandrel
Application Suitability	Limited Access Areas, Single-Sided Assembly, Material Joining

Operational Details

Installation Method

- Mandrel is pulled through the rivet body
- Rivet body expands to clamp materials
- Joint is secured
- Excess mandrel breaks off
