

Phenolic Foam Mixing Head

High-performance mixing head designed for phenolic foaming applications. It incorporates advanced mixing technology for uniform cell structure and reduced material waste.

Product Overview

High-Performance Phenolic Foaming Solution

This high-performance mixing head is engineered specifically for phenolic foaming applications, ensuring consistent material quality and uniform cell structure. Designed for demanding industrial environments, it features robust construction and advanced mixing technology to reduce material waste. The system supports precise control of material flow and mixing ratios, with seamless integration capabilities for automated process control.

Technical Specifications

Component Type	Phenolic Foam Mixing Head
Key Features	Hydraulic Connections, Automated Control Ready, Recirculation Capable, High-Durability Construction
Maintenance	Designed for easy cleaning and maintenance to minimize downtime
Hydraulic System	SMPA 3/8EE250252 MT

Performance Metrics

Mixing Performance

1 Optimized

Uniform Cell Structure
