

Phosphate Fertilizer Production Plant

This plant is designed for the production of phosphate fertilizer with a capacity of 120,000 tons per year. It is equipped to handle 240,000 metric tons per year of phosphate.

Overview

Industrial Phosphate Fertilizer Facility

This large-scale phosphate fertilizer production plant represents a robust solution for high-capacity chemical processing. With a proven operational history dating back to 2010, the facility is engineered to deliver reliable and consistent industrial output. Designed for scalability, it supports significant annual production volumes to meet demanding market requirements.
