

# Phosphoric Acid Production Plant (360,000 Tons/Year)

This is a phosphoric acid production plant with a capacity of 360,000 tons per year. The plant includes interconnected units like storage tanks, reactors, and distillation columns.

## Project Overview

### Industrial-Scale Phosphoric Acid Production

This large-scale phosphoric acid production facility is engineered to deliver an annual capacity of 360,000 tons. Utilizing proprietary technology with independent intellectual property rights, the plant is designed for high-efficiency chemical synthesis and robust operational reliability. It represents a comprehensive solution for large-scale industrial chemical manufacturing needs.

## Key Performance Metrics

### Annual Production Capacity

**360000 Tons/Year**

Annual Capacity

## Technical Specifications

### Facility Scale

Large-scale • Industrial • High-Capacity

### Technology Origin

Proprietary technology with independent intellectual property rights
