

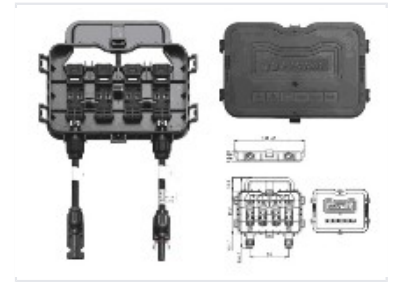

Photovoltaic Solar Panel Junction Box

This junction box is designed for photovoltaic (PV) solar panel applications. It provides secure cable entry points and a durable housing, suitable for outdoor installations and efficient wiring integration within solar energy systems.

Product Overview

Robust Solar Connectivity

The PV-CY801 is a high-performance junction box specifically engineered for photovoltaic solar panel applications. Designed to endure demanding outdoor conditions, it ensures the long-term reliability and protection of vital electrical connections within solar energy systems. Its professional-grade construction facilitates secure cable entry and efficient wiring, making it an essential component for diverse PV system configurations.

Design and Build

Connectivity Features

- Multiple terminal connections
- Secure cable entry points
- Optimized for PV integration

Environmental Durability

Outdoor Rated, Weather Resistant, Durable Housing
