

Pillar Type Vertical Drilling Machine

This heavy-duty pillar type vertical drilling machine is designed for precision drilling. It features a vertically adjustable worktable and a multi-speed gear system for optimized drilling performance.

Overview

High-Precision Vertical Drilling Solution

This newly designed pillar-type vertical drilling machine offers a compact and robust construction suitable for industrial and workshop environments. It features a wide speed change range and an adjustable working table that rotates 180° and tilts ±45°, providing exceptional versatility for complex machining tasks. Equipped with an integrated coolant system and advanced safety protections, it is an ideal choice for single-piece, small-batch, and mass production operations.

Key Features

Certifications & Safety

CE Certified • IEC Standard Compliant • Overload Protection • Shortcut Protection

Machining Capabilities

Drilling, Counter boring, Reaming, Tapping, Spot facing

Technical Specifications

Worktable Adjustments

180 degrees

Rotation Angle

45 degrees

Tilt Angle

Equipment & Accessories

- Manual-operated lifting device
- Integrated coolant system
- Tapping mechanism
- Powerful spindle motor
