

Pillow Block Ball Bearing Unit

Pillow block ball bearing units support rotating shafts and are pre-assembled in either cast iron or pressed steel housings. These bearings are designed for easy installation and accommodate misalignment in various industrial applications.

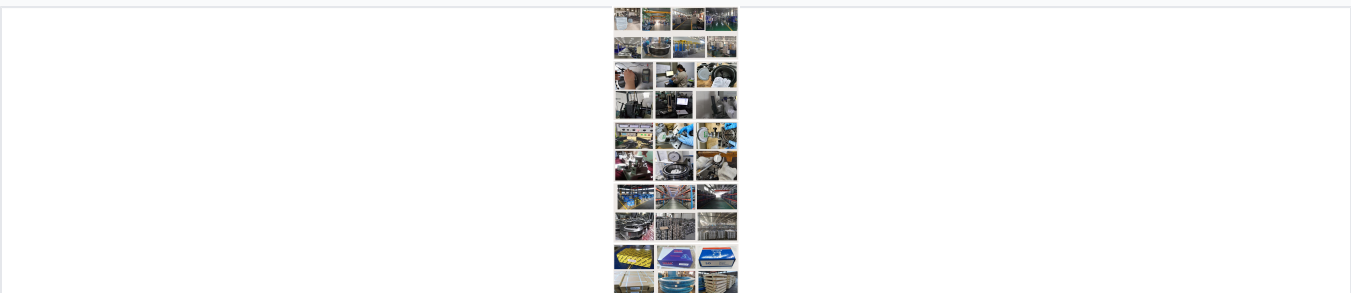

Product Overview

Standard pillow block bearing unit featuring a robust housing designed for industrial shaft support.

Reliable Shaft Support
Pillow block ball bearings are essential mounted bearing units designed to provide robust support for rotating shafts in various industrial environments. These units consist of a durable housing, typically constructed from cast iron or pressed steel, which contains a precision ball bearing insert. Engineered for ease of installation and maintenance, these bearings are an ideal solution for applications such as conveyors, fans, and agricultural machinery, ensuring smooth operation and longevity.

Key Features

Precision-engineered bearing unit designed for demanding industrial applications and smooth operation.

- Design Advantages**
- Accommodates shaft misalignment
 - Easy installation and maintenance
 - Robust cast iron or pressed steel housing
 - Cost-effective performance
 - Suitable for diverse load and speed requirements

Common Applications	Conveyors, Fans, Agricultural Machinery, Industrial Shaft Support
